

# Patient Throughput Review

We generate relevant data. You know what to do with it.

## What is the Patient Throughput Review?

Patient Throughput Review (PTR) leverages Medworxx's robust objective criteria to help identify barriers and delays to patient flow.

By utilizing the flagship Medworxx Clinical Criteria module methodology, the Patient Throughput Review program identifies the root-cause of patient flow barriers. Delay reasons are specifically categorized: Physician, Hospital Service, and Community.

The data collected provides insight into the specific barriers that contribute to less than optimal patient flow.

The PTR engagement applies Medworxx Clinical Criteria to retrospectively or assess the appropriateness of inpatient stay days for the hospitals discharged patient population.

The purpose of the PTR is to identify the underlying/root causes of patient flow barriers which can be used to understand exactly what systemic issues the hospital is facing. The PTR findings prompt action and provide focus for fixing issues, particularly in the context of process improvement initiatives.

### Unlock high-quality data not typically available

Access higher quality information on patient flow performance through clinical criteria sets. Medworxx makes getting the impossible data easy. With the Patient Throughput Review you can access:

- ED visits: met vs. not met admission criteria
- # patient days that did not meet inpatient criteria
- # of avoidable days caused by MD delays, social issues, post-acute care provider delays, etc.
- # of days at risk for payer denials

## Medworxx PTR Progression of Care Analytics: Every Patient, Every Day

### Ease of data collection and analysis compared to traditional patient flow engagements

DATA COLLECTION	Medworxx Patient Throughput Review	Traditional Patient Flow Engagements
Chart reviews	●	●
Quantitative data entered directly in software	●	
Determination of appropriateness based on standardized, evidence-based clinical criteria	●	
Determination of readiness for discharge based on standardized, evidence-based clinical criteria	●	
Data collection done without the need for hospital IT/Decision Support	●	
Observation of key clinical patient flow workflows such as bullet rounds and bed management meetings	●	●
Interviews conducted with key stakeholders including Finance Director	●	●
ANALYSIS		
Reports and graphs automatically generated from software	●	
Customized data analysis	●	●
Repository of analysis and insight generation for key patient flow indicators	●	

Overview of the audit	
Process	A trained clinical assessor reviews patient charts and enters the status into Medworxx. Retrospective (e.g. 200 bed hospital)
Timeframe	4 days (Days and amount or resources will change depending on the size of the engagement)
# Charts	50 discharged patient charts (approximately 25% of the beds).
# Assessors	2 trained clinical assessors (or we will train your staff to perform the reviews)
# Interviews	30 min interviews with 4–6 key stakeholders
Workflow Observations	1 bullet round and 1 bed management meeting
Output	Report and presentation of findings to client's Sr. Executives, which includes: <ul style="list-style-type: none"> <li>• Analysis of current bed utilization effectiveness</li> <li>• Patient flow barriers and sources of delays</li> <li>• Recommendations to improve flow, eliminate waste/delays, improve resource utilization</li> </ul>

## Why partner with Medworxx?

Medworxx is a leader in patient flow solutions, with an international client base.

With Medworxx Patient Flow, you will have visibility as to the status of every patient every day, and clear indicators of any barriers or delays to their appropriate transition through the continuum of care.
