

Clinical Criteria

Appropriate, safe and optimized patient flow

Medworxx Patient Flow Platform is an enterprise software solution designed to optimize patient flow and safeguard appropriate care and transitions. Medworxx Clinical Criteria, one of three modules in the Medworxx Patient Flow Platform, is an evidence-based clinical decision support tool that eliminates clinical subjectivity and standardizes data collection. Care teams use Medworxx Clinical Criteria to assess every patient every day for appropriate admission and level of care, in addition to identifying barriers, interruptions and delays to patient flow.

Medworxx-trained nurses and clinicians monitor patient status daily using patient population specific clinical criteria sets:

Pre-admit
Medical/Surgical
ICU
Mental Health
Pediatrics
Newborn
Post-partum
Complex Continuing Care
Rehabilitation

Identify, Measure and Mitigate Barriers, Interruptions and Delays

By incorporating Medworxx Clinical Criteria to pre-existing processes and program delivery models, barriers' root-causes are contextually identified in each organization, resulting in granular and specific information categorized by delay reasons: Physician, Hospital and Community reasons. The depth of details within each delay reason can be as minute as variations in clinical practice categorized by physician/physician-type, bottlenecks categorized by departments/units/services, or lack of rehab resources in the community.

Collecting standardized, facility-specific and clinically objective data develops a consistent and reliable communication model to synchronize decision-making for multi-disciplinary care team and foster organizational transparency. Medworxx Clinical Criteria empowers users to uphold accountability and ensure safe and appropriate care and transitions.

Medworxx Patient Flow Platform analytics engine informs decision-making at every level – from bedside to boardroom. Real-time reporting and historic trending capabilities facilitate information mapping to Key Performance Indicators for ongoing performance monitoring and evaluation.

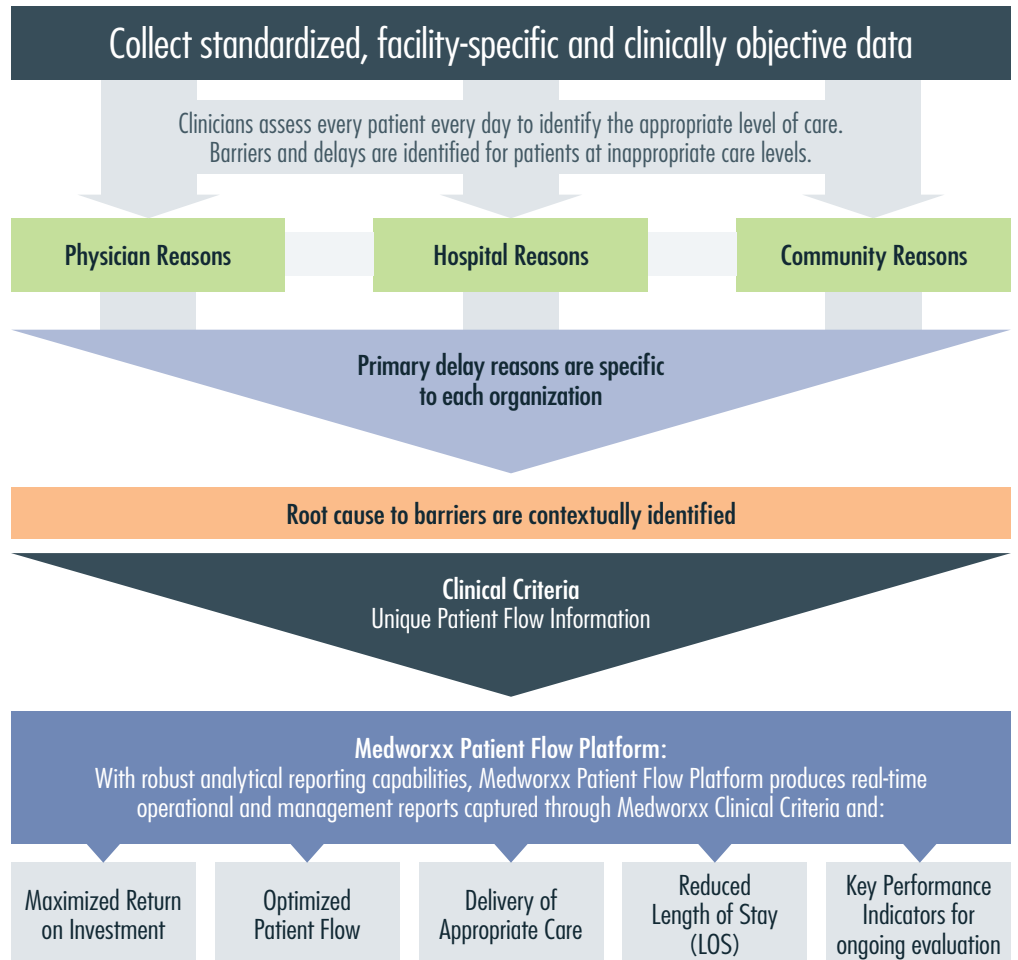

Maximize your return on investment by implementing Medworxx Clinical Criteria to accomplish:

- Reduced flow delays
- Decreased Length of Stay
- Timely discharges
- Reduced avoidable days
- Increased capacity and throughput
- Improved resource utilization
- Reduced preventable readmissions

Medworxx Clinical Criteria supports your ability to provide the most appropriate level of patient care.

Medworxx Clinical Criteria Methodology

Medworxx Clinical Criteria is the leading module in the Medworxx Patient Flow Platform that also includes Medworxx Bed Management and Medworxx Forms & Assessments.
